Harbor Cleanup  
United States Environmental Protection Agency  
805 SW Broadway Ste 500  
Portland, Oregon 97205

Greetings,

**Subject: Cleanup Plan for the Portland Harbor Superfund Site**

It's not acceptable to leave toxic contamination in the river even if it's monitored. "Monitored Natural Recovery" is the same as doing nothing. Toxic contamination should be removed to an approved landfill. Dredged sediments with toxic contamination should be sent to an approved landfill. The idea is to cleanup the river, not to find ways to avoid river cleanup by leaving pollution in place. And the polluters should pay for the cleanup.

Fish are poison in the Superfund reach. A prime objective of the cleanup should be restoration of the river such that the Fish Consumption Advisory warning (that the fish are poison) is no longer needed.

I urge the EPA to modify the cleanup plan so that it removes toxic contamination and restores the fishery. Anything less than that is failure, and I oppose it.

Sincerely,
